MARIS.AI · GREECE · SAUDI ARABIA

Navigation data you can trust

Maritime cyber security for shipowners, ports, insurers and security teams.

October 2026

THE CHALLENGE

Decisions at sea depend on data that can be wrong

01

False positions

GNSS and AIS interference during the 2026 regional crisis triggered false compliance alarms for banks, insurers and charterers.

02

Security teams without maritime context

SOC tools see maritime alerts, but have no playbooks for AIS, radio or port-state rules.

03

Radio traffic that leaves no record

VHF and GMDSS calls carry the most urgent information at sea, and most of it is never written down.

WHAT WE OFFER

Four plugins and one audit service

01

SOAR Content Pack

Ready-made maritime playbooks for the security tools you already use, with compliance reports generated automatically.

02

SDR-AIS Fusion Edge

Checks what vessels report against what the radio hears, and independent reports on navigation-data quality.

03

LLM-SOC Triage

Classifies every maritime alert in under two seconds and recommends the next step. A person always confirms.

04

Voice Intelligence

Live transcripts of VHF and GMDSS calls, urgent calls highlighted, and a compliant archive.

05

Ship handover audit

A cyber audit when a vessel is sold, with one report for seller, buyer and insurer.

WHY MARIS.AI

Built for maritime, ready for your team

◆ Independent

MARIS assesses data from other providers. It does not sell receivers, consoles or data.

◆ Works with what you have

Plugs into existing SOC, VTS and fleet systems. No deployment project.

◆ People stay in charge

Every recommendation is explained and confirmed by an operator.

◆ Your data stays where it must

Cloud, on-premise or a sealed node on site, to meet local data-protection law.

◆ In your language

English, with Greek for pilots and Arabic with full right-to-left layout.

◆ Evidence that holds up

Signed reports and records for insurers, disputes and port inspections.

YOUR MARKET

For Greece and Saudi Arabia

Greece

- Ship managers and family-owned shipping companies
- Local and island ports and terminals without large radar systems
- P&I clubs in Piraeus

Interface in English, with Greek for pilots.

Saudi Arabia

- National fleets with a central fleet SOC
- Financiers, insurers and charterers
- Maritime rescue and monitoring centres

Arabic interface with full right-to-left layout. On-premise or in-country delivery under the PDPL.

GREECE → SAUDI ARABIA

When a Greek owner sells a vessel to a Saudi buyer, both sides receive the same handover audit.

GET STARTED

Start with a pilot

PILOT 01

Navigation-integrity evidence report

For P&I clubs and owners operating in the region

8–10 weeks

PILOT 02

Cyber audit at ship handover

For sellers, buyers and their insurers

2–4 weeks

PILOT 03

Data-quality check for a fleet platform

For fleet AI and analytics platforms

6–8 weeks

No installation on vessels in conflict zones. You receive a report and alerts in a standard format.
